

QUESTION BANK

UNIT – 2

4 MARKS

1. Write short notes about requirements engineering.
2. Define functional requirements.
3. Define non - functional requirements
4. Define domain requirements.
5. Differentiate user requirements and system requirements.
6. List out the phases of requirements engineering.
7. Define feasibility study .
8. Define project estimation
9. Define LOC and KLOC.
10. Define three types of projects in COCOMO model.
11. Define function point of metrics.

8 MARKS/15 MARKS/HIGHER ORDER LEVEL THINKING QUESTIONS

1. Describe the different kinds of functional , non functional , domain and software requirements.
2. Explain in detail about the software requirement document.
3. Explain interface specification for a software project with example.
4. Explain the different phases of requirements engineering along with neat diagram.
5. Explain the different kinds of feasibility study and its outcome for a project .
6. Explain the steps and techniques involved in project estimation process.
7. Define COCOMO model and explain the different phases involved in COCOMO model along with neat diagram.
8. Calculate effort and time for each of the three modes of project development by using COCOMO model for a project estimation of 600 Kilo Lines Of Code.
9. Define COCOMO II model and also Explain about different stages involved in COCOMO II Model .
10. Write short notes on Function point metrics involved in a software project development.
11. Differentiate COCOMO I Model and COCOMO II Model .
